

NW 90th Street between 14th and 12th Aves NW

NW 90th Street

Project ID # Ballard SDOT Project

Type of Improvement: Sidewalk

Neighborhood: Crown Hill

Approximate Length:

Street Classification: Residential

Description of Problem and/or Project:

There is an existing sidewalk on the north-side of NW 90th Street which ends at the business district. This location is a priority area in the Pedestrian Master Plan because of its lack of existing sidewalk network and proximity to a major business district. The Pedestrian Master Plan identifies priority areas in the city based on three factors:

- 1 Demand which estimates where people are walking the most
- 2 Equity which attempts to identify the areas with greatest need (i.e. high rates of obesity, lower than average socio-economic level, low car ownership)
- 3 Corridor function which aims to identify streets which provide key links

This project would continue the existing sidewalk and connect the residential area to the business area.
